

Paediatric Physiotherapy Ireland: Supporting Every Child's Growth and Development

Presented By
Craniaa Neuro Rehab Centre

Paediatric physiotherapy Ireland plays a vital role in supporting babies, children and teenagers with movement, balance, coordination and physical development. Paediatric physiotherapists work with children from birth to 18 years of age providing evidence-based assessment and treatment tailored to each child's individual needs.

At Craniaa Neuro Rehab Centre we are dedicated to providing compassionate and personalised paediatric physiotherapy services that help children overcome physical challenges and achieve important developmental milestones. Our experienced therapists collaborate closely with families to create treatment plans that support long-term progress.

Conditions Treated Through Paediatric Physiotherapy

Paediatric physiotherapy Ireland can benefit children with a wide range of neurological, developmental and orthopaedic conditions.

Some of the most common conditions include:

- Developmental delays
- Cerebral palsy
- Torticollis and plagiocephaly
- Toe walking
- Hypermobility
- Balance and coordination disorders
- Sports injuries
- Muscle weakness

Our Approach at Craniaa Neuro Rehab Centre

At Craniaa Neuro Rehab Centre we believe that every child deserves the opportunity to move confidently and participate fully in everyday life. Our paediatric physiotherapy Ireland sessions begin with a comprehensive assessment to understand the child's physical abilities, developmental stage and specific challenges.

- Strength and balance exercises
- Gross motor skill development
- Gait and walking training
- Stretching and flexibility exercises
- Functional movement training

Why Early Physiotherapy Matters

Early intervention is one of the most effective ways to support a child's physical development. Addressing movement difficulties at an early stage can prevent secondary complications, improve independence and build confidence during everyday activities such as walking, running, playing and participating in school.

Parents are encouraged to seek professional advice if they notice delays in developmental milestones, unusual movement patterns, poor balance or persistent muscle weakness. A timely physiotherapy assessment can identify concerns early and provide the right treatment at the right time.

Choose Craniaa Neuro Rehab Centre for Paediatric Physiotherapy in Ireland

At Craniaa Neuro Rehab Centre we are committed to delivering high-quality paediatric physiotherapy ireland services across Ireland. Our experienced team focuses on family-centred care ensuring parents are actively involved throughout the rehabilitation process.
